

LSS

Discovery Mini

The LSS *Discovery Mini* is a control panel for the Discovery Studio automation system and combining the Discovery control panel, the large control centre with digital joystick and extended quad-keyboard, with Discovery Light and its slim design. The Discovery Mini can be used to move the position of the upper machinery of television studios horizontally and vertically, and to control parts of the lighting, barn doors, colour changers etc. remotely.

The LSS *Discovery Mini* is equipped with a 6.5 " TFT touch monitor. As on the large control panel all devices can be selected on the screen as well controlled and moved with the joystick. The joystick is equipped with a dead man's switch. Together with the emergency switch located on the console, it's part of the SIL3 safety concept.

Like the other control panels of the Discovery system, the *Discovery Mini* is equipped with an industrial connector HAN 16. With it all connections to the device interfaces, power supplies and safety components are bundled in one connector. In case of emergency the LSS *Discovery mini* can be connected in one handle and take control of the system.

Technical Specifications:

Monitor	6,5" Touch TFT
Processor	Atom N270
Mainboard	LE374
Hard disk	Flash memory 4GB
OS	Windows Embedded Standard
Operation temperature	0° - 40°C, not condensed
RoHS	Conform
Dimensions (W x D x H)	226mm x 530mm x 219mm
Weight	Ca. 6,5kg
Order number	5151
